1 CA- Data Structures 1) Student will be

C3T

able to choose appropriate data structure as applied to specified problem definition.

- 2) Student will be able to handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
- 3) Students will be able to apply concepts learned in various domains like DBMS, compiler construction etc.
- 4) Students will be able to use linear and non-linear data structures like stacks, queues, linked list etc.
- 5) Ability to analyze algorithms and algorithm

3	BCA303	Object Oriented Programming using C++	1) Perform object oriented																																																	

programming to develop solutions to problems

- 2) Demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
- 3) Demonstrate adeptness of object oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
- 4) Learn syntax, features of, and how to utilize the Standard Template Library.
- 5) Learn other features of the C++ language including templates, exceptions, forms of casting, conversions, covering all features of the language.
